1. Smart Touch & Pos for Retail Overview

Smart 2nd Generation Point of Sales system, **Touch & POS for Retailing**, has been carefully designed for the retailing industries.

Providing everything in Retailers needs, from a busy quick single outlet to multiple outlets, Touch & Pos will help to manage and grow sales while delivering good customer service, and most importantly, improve the entire operation.

Touch & Pos is designed to help small, medium and large businesses to keep track of customers, sales and inventory. Touch & Pos offers large icons to learn interface, so you don't need a computer genius to operate.

With Smart Touch & Pos, you can have: -

- Sales data is automatically send back to HQ via internet, ANYWHERE, ANYTIME, without pressing of any button or using any ftp.
- Auto lock screen for unauthorized entry
- Loyalty (Members) program that gets customers keep coming back.
- Comprehensive Back Office reporting helps you keep track of all sales while using less time.

2. Touch & Pos Unique Features

i. Online Technology

This unique and innovative online transferring of data (both sales and master data) using any available internet facility has been in use since 2004. It does not require any ftp, remote access, VPN (Virtual Private Networking), WAN or Intranet. All is required is just any simple internet connection. User need not press any button at all. Data will be automatically transmitted to HQ depending on the interval time set.

ii. Colorful Touch Screen Design Mode

Using the latest Dot.Net technology, the display screen is set to be colorful and refreshing, not just to the staffs who are using it, but also to customers who happen to see it.

Users can put in pictures (in various files format as recognized by Windows) of the items at the screen for easy identification. (Fig 1)

Fig 1

iii. Auto User Lock

Automatically lock the current transaction screen to prevent unauthorized data entry. This feature can be set at the Cashier or Waiter Ordering screen.

iv. Full Screen Customer Display

Replacing the traditionally use Customer Display Pool. Touch & Pos Full Screen Customer Display allows retailer to have a standard monitor to display sales information for customers. At the same time, also display customers promotions, offers, services via picture or movie files (Fig 2).

Fig 2

v. Audit Trail

A cashier key in the items a customer order, collect cash and deliver the items to customer. Subsequently, when the customer left the counter, the cashier, using the supervisor password, delete certain items

This situation will be captured at the Audit Trail for management analysis.

vi. Audit Tracking

Tracks all modification of the transaction.

example

A cashier key in the items a customer order, collect cash and deliver the food to customer. Subsequently, when the customer left the counter, the cashier change the quantity or discount or price of the transaction

The scenario will be captured at the Audit Track for management analysis.
